Deadline for manuscript submissions:

31 January 2022

Message from the Guest Editors

Electronic devices are widely used both in industry and in daily life in applications such as information processing, telecommunication, and signal processing. Technology has been developing at a fast pace in recent decades, and we are now seeing not just technology enthusiasts who feel the need to upgrade to the latest gadget as soon as it is released, but also regular members of society who find it difficult to spend even a few hours without their mobile phone, tablet or laptop, all of which have become an indispensable part of our everyday routine.

This Special Issue is the product of the collaboration of the *Electronics* journal with the 2021 International Conference on Electron Devices and Applications (ICEDA 2021) to be held in Nanjing, China on 14–16 August 2021. Website: www.iceda.org

The objective of the ICEDA 2021 is to support the sharing of the latest research results between scientists in the relevant fields.

This Special Issue will review papers based on presentations made at the ICEDA conference, as well as other relevant contributions.
